3-Day Training Outline

FUNDAMENTALS OF PRACTICAL PROCESS SAFETY MANAGEMENT

This course will focus on the 14 elements included in the OSHA PSM and EPA RMP Standards. In our three-day course, you will learn from an experienced senior process safety consultant, who will utilize their experiences with a variety of PSM programs to provide you with examples and workshops to help you understand the compliance objectives and how to tailor a PSM program to your facility.

Pre-Work

Background preparation prior to class provides more time for hands-on exercises. Using the provided pre-work materials, each trainee will:

- Review CSB case studies and videos related to specified PSM elements
- Be prompted to think about provided discussion topics that will be presented in class during group activities

Day 1

Importance of Process Safety
Inherently Safer Design Concepts
Overview of PSM Elements
Process Safety Information (PSI)

Day 2

Operating Procedures
Training
Contractors
